

INTERNATIONAL DEFENCE WEEK

EUROSATORY 2010

2010
EUROSATORY PARIS 14 - 18 JUNE 2010

Following our successful participation at Eurosat, the leading European defence exhibition for 2010, we would like to take this opportunity to thank all the visitors to our stand and for the interest shown in our products.

Eurosat 2010 was attended by many high calibre visitors associated with Global Security and Defence. We therefore presented our core Military ranges from Weald Electronics, ITW McMurdo and Souriau Connection Technology. In particular we took the opportunity to showcase our new High-Speed Data solutions in the form of Souriau's 'Elio'® Fibre Optic and Quadrax connectors and the AC/DC power connector solutions from Weald Electronics. We also presented ITW McMurdo 801, 801CX & M200 Series board connectors. Lane Electronics offers a rapid assembly & delivery service for all of these and many more connector variants.

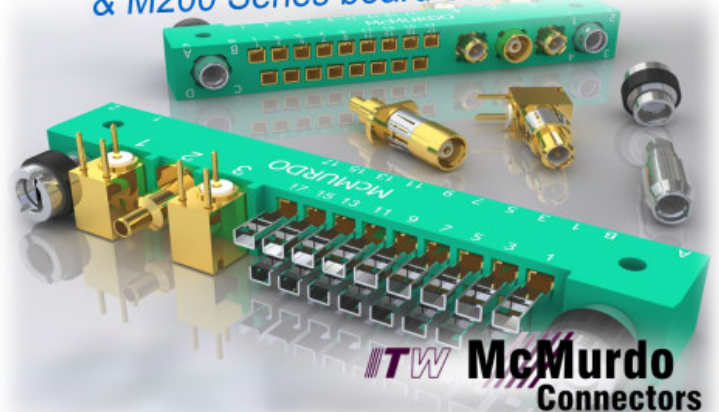

If you require any further information on our new or existing products, then please visit our website, www.fclane.com, or contact our Sales Team as per details below.
