What Makes Positronic’s New “PosiBand®” Contact Interface a Significant Improvement?

High reliability connectors utilize female closed entry contacts that provide an unbroken ring of solid material at the face of the contact. The closed entry feature is crucial in preventing damage to female contacts used in harsh environments, repeated mating cycles, blind mate applications and applications requiring highest reliability.

The most common closed entry design utilized by connector manufacturers is a split tine and sleeve concept. See figure 1. With this design, both the mechanical forces and electrical interface are provided only at the tip of the female contact.

Positronic’s new PosiBand technology takes a unique approach to closed entry female contacts. PosiBand contacts utilize a two-piece contact design. See figure 2. Each piece serves a separate function, providing a more mechanically robust contact and more consistent electrical performance.

The main body of the PosiBand contact provides a true closed entry opening to enhance robustness. The PosiBand spring clip provides normal force on the male contact. Consistent electrical performance is supported through a larger area of contact interface between the male and female contact along the entire “floor” of the contact body. PosiBand contacts are QPL listed under SAE AS39029 and qualified under GSFC S-311-P4 to the higher 40 gram contact separation test requirement.

continued on next page . . .
The PosiBand® contact system has many advantages over the legacy split tine design.

- **PosiBand** is more robust than the split tine contact, which can be pried open in harsh environments, resulting in reduced normal force and degradation of electrical performance.
- **PosiBand** has greater surface area at the male and female contact interface, resulting in more consistent electrical performance.
- **PosiBand** has lower average insertion forces, resulting in greater ease in mating, especially in larger high density connectors. The average lower insertion force is accomplished while meeting or exceeding performance requirements.
- The **PosiBand**'s contact body does not require annealing of the crimp barrels, as does the split tine design. This eliminates concern of unintentionally heat-treating the mating end of the contact, which can cause electrical failure.
- **PosiBand** is qualified under SAE AS39029 specification. **PosiBand** is also qualified under GSFC S-311-P4/08 Rev C and GSFC S-311-P4/10 Rev C to the higher 40 gram contact separation test requirement.
- **PosiBand** is protected by US Patent 7,115,002.

For more details about the advantages of the PosiBand system, please view the detailed white paper at www.connectpositronic.com/white-papers or visit our web site at www.connectpositronic.com.

CONNECTOR COMPONENT DESCRIPTION AND TERMINOLOGY

A1 - Male and female signal contacts, size 22. Terminations may be crimp, solder cup and printed board mount.

A2 - Male and female signal contacts, size 20. Terminations may be crimp, solder cup, wrap post, compliant press-fit and printed board mount.

B1 - Unloaded connector insulators, male and female. Insulator retention system retains all contact termination types. Insulator may be used as a free or fixed connector.

B2 - Loaded connector insulators, male and female. Insulators may be preloaded per customer requirements with contacts having terminations of right angle (90°) or straight solder printed board mount, wrap post, solder cup and press-fit. Insulator contact positions may be selectively loaded with contacts. Connectors are normally fixed panel or printed board connectors.

C1 - Fixed female jackscrews are the stationary threaded members of the non-polarized jackscrew system.

C2 - Fixed male and female jackscrews are the stationary threaded members of the polarized jackscrew system.

C3 - Rotating male jackscrews and screwlocks are the rotating threaded members of the non-polarized jackscrew system.

C4 - Rotating male and female jackscrews are the rotating threaded members of the polarized jackscrew system.

C5 - Vibration locking system consists of lock tabs on fixed connector and slide lock lever on free cable connector.

C6 - Blind mating connector system with pilot probes on free connector and receptacle guides on panel mounted fixed connector.

C7 - Cable adapters [Hoods] are used on the free cable connector to provide cable support and contact protection.

C8 - Knobs of the polarized rotating jackscrew system are affixed to the rotating jackscrew by a set screw.
Melo-D series connectors are professional quality connectors recommended for use in sheltered, non-corrosive indoor or outdoor environments having normal ventilation, but without temperature or humidity controls. These fixed contact connectors meet the dimensional and performance requirements of IEC 60807-2, Performance Level Two.

Melo-D series connectors utilize precision machined contacts which are fixed within the connector body. The female contact is an open entry design contact, precision machined of high tensile phosphor bronze. Six standard connector variants are offered in arrangements of 9, 15, 25, 29, 37 and 50 contacts. Each Melo-D connector variant is available with contact terminations for solder cup, wrap post, and straight and right angle (90°) printed board mount terminations featuring a choice of three printed board footprints. Melo-D series connectors are mateable and compatible with all D-subminiature connectors conforming to IEC 60807-2, IEC 60807-3 and MIL-DTL-24308.

A wide assortment of printed board mounting hardware, cable support hoods and locking systems is available from stock.

MDX series connectors are industrial quality connectors recommended for use in sheltered, non-corrosive indoor or outdoor environments having normal ventilation, but without temperature or humidity controls. These fixed contact connectors meet the dimensional and performance requirements of IEC 60807-2, Performance Level One.

MDX series connectors utilize precision machined contacts which are fixed within the connector body. The female utilizes Positronic’s unique PosiBand closed entry contact system, see page 1 for details.

Five standard connector variants are offered in arrangements of 9, 15, 25, 37 and 50 contacts. Each variant is available with contact terminations for solder cup and straight and right angle (90°) printed board mount terminations. MDX series connectors are mateable and compatible with all D-subminiature connectors conforming to IEC 60807-2, IEC 60807-3 and MIL-DTL-24308.

A wide assortment of printed board mounting hardware, cable support hoods and locking systems is available from stock.

Soli-D series connectors are professional quality connectors recommended for use in sheltered, non-corrosive indoor or outdoor environments having normal ventilation, but without temperature or humidity controls. This crimp removable contact connector will meet the Performance Level Two requirements of IEC 60807-3.

Soli-D series connectors utilize precision machined contacts with closed barrel, crimp terminations. The female contact features a rugged open entry design. Other contact terminations such as solder cup and printed board terminations are also available. The removable contact feature provides for rapid assembly and permits contact repairs or wiring changes.

Five standard contact variants are offered in arrangements of 9, 15, 25, 37 and 50 contacts. Soli-D series connectors are mateable and compatible with all D-subminiature connectors conforming to IEC 60807-2, IEC 60807-3 and MIL-DTL-24308.

A wide assortment of cable support hoods and locking systems is available from stock.

Rhapso-D series connectors are military quality connectors designed for use in sheltered, mildly corrosive environments having a wide range of temperature, pressure and humidity changes. Applicable crimp removable contact connectors are qualified to MIL-DTL-24308 and SAE AS39029 (see page 82 for more information), and will meet the performance requirements of IEC 60807-3, Performance Level One.

Rhapso-D series connectors utilize precision machined contacts with closed barrel, crimp terminations. The female utilizes Positronic’s unique PosiBand closed entry system, see page 1 for details. Rugged open entry female contacts are also available.

Six standard connector variants are offered in arrangements of 9, 15, 25, 29, 37 and 50 contacts. Rhapso-D series connectors are mateable and compatible with all D-subminiature connectors conforming to MIL-DTL-24308, IEC 60807-2 and IEC 60807-3.

A wide assortment of cable support hoods and locking systems is available from stock.

## For information regarding CRIMP TOOLS & CRIMPING TOOL TECHNIQUES, see page 78.
ORD series connectors are professional / industrial quality connectors with closed barrel crimp removable contacts. ORD series connectors are recommended for use in sheltered, mildly corrosive environments having a wide range of temperatures with normal ventilation where high performance is required.

ORD series connectors utilize precision-machined contacts to provide durability. Female contacts feature the low cost, high performance rugged open entry design, meeting the performance requirements of IEC 60807-3, Performance Level Two. Female PosiBand closed entry contacts are optional and meet IEC 807-3, Performance Level One.

Six standard contact variants are offered in arrangements of 9, 15, 25, 29, 37, and 50 contacts. ORD series connectors are mateable and compatible with all D-Subminiature connectors conforming to MIL-DTL-24308, IEC 60807-2, and IEC 60807-3.

A wide assortment of cable support hoods and locking systems is available from stock.

** For information regarding CRIMP TOOLS & CRIMPING TOOL TECHNIQUES, see page 78.
Densi-D series connectors are military quality, high density connectors designed for use in sheltered, mildly corrosive environments having a wide range of temperature, pressure and humidity changes. Applicable connectors are qualified to MIL-DTL-24308 and SAE AS39029 (see page 82 for more information).

Densi-D series connectors utilize precision machined contacts with closed barrel crimp terminations, solder cup terminations, straight and right angle (90°) printed board mount. All female contacts utilize Positronic’s unique PosiBand closed entry design, see page 1 for details.

Six standard contact variants are offered in arrangements of 15, 26, 44, 62, 78 and 104 contacts. Densi-D series connectors are mateable and compatible with other high density D-subminiature connectors conforming to MIL-DTL-24308.

A wide variety of unique accessories are available.

PCD series connectors are quality connectors with compliant terminations. The low press-in force required to install the contacts into the board eliminates printed board pressure-warp and twisting stresses which can result in expensive repair or replacement of printed boards and back panels.

Five standard connector variants are offered in arrangement of 9, 15, 25, 37, and 50 contacts. PCD connectors are mateable and compatible with all D-subminiature connectors conforming to IEC 60807-2, IEC 60807-3, and dimensional requirements of MIL-DTL-24308.
